

FOR MEDIA RELEASE**January 23, 2026****Granite Falls Composites Expands Capacity for Lightline™ InstantBond GRP**

Granite Falls, NC — Granite Falls Composites (GFC) announced a strategic reinvestment into its manufacturing operations to expand capacity and increase flexibility in the production of EAA-coated GRP, branded as Lightline™ InstantBond.

The investment reflects GFC's continued commitment to the fiber optic cable market, its employees, and the sustained growth achieved since completing its management buyout (MBO) and launching its new ownership and identity in July of last year.

Expanded capabilities will enable GFC to better support increasing customer demand, improve manufacturing agility, and deliver consistent, high-performance bonding solutions across a wider range of product configurations.

“This investment demonstrates our confidence in both the market and our team,” said Jamey Little, CEO of Granite Falls Composites. “Since the MBO, we’ve experienced strong momentum, and reinvesting in our operations ensures we remain a responsive, U.S.-based partner for our customers’ evolving needs.”

The reinvestment also reinforces GFC’s long-term commitment to workforce development and sustainable growth in the Granite Falls community.

About Granite Falls Composites: Granite Falls Composites is a U.S.-based manufacturer of high-performance composite and fiber optic cable components, delivering engineered solutions backed by technical expertise, operational reliability, and customer-focused support.
